DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims 1-53 are drawn to a memory device having first y-drivers, redundant array, redundant y-drivers, and a controller to generate a selection signal to enable redundant y-drivers and to generate a disable signal to disable said first y-drivers ***in response to a failure of said testing of said level by said first circuit of said corresponding first y-driver***, etc;

Group 2, claims 54-56 are drawn to a memory device having a memory array with plurality of N-bit cells that ***each stores 2N levels*** arranged in columns and including N-bit cells that ***each stores less than 2N levels*** arranged in columns, a redundant array with plurality of N-bit cells that ***each stores 2N levels*** arranged in columns and including N-bit cells that ***each stores less than 2N levels*** arranged in columns;

Group 3, claims 57-61 are drawn to a memory device having a memory device having plurality of y-drivers, redundant array, redundant y-drivers, ***and a comparator to detect the contents of selected ones of memory cells and having autozeroing of an offset of said comparator***,

Group 4, claims 62-63 are drawn to a memory device having first y-drivers...,etc., ***and including a bit line monitor circuit coupled to a bit line***..., redundant array,

Art Unit: 2818

redundant y-drivers, and a controller and a controller to generate a selection signal to enable redundant y-drivers and to generate a disable signal at least one of said first y-drivers in the event of failing of said testing of said level by said first circuit;

Group **5**, claims **64-70** are drawn to a method for ***storing data*** in memory system, etc.;

Group **6**, claims **71-77** are drawn to a method for ***writing data*** in memory system, etc.;

Group **7**, claims **78-88** are drawn to a method for ***erasing data*** in memory system, etc.;

Group **8**, claims **89-97** are drawn to a method for ***reading data*** in memory system, etc.;

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 2818

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Q Nguyen whose telephone number is (571) 272-1788. The examiner can normally be reached on 7am-6pm (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on (703) 308-4910. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
